- unrestricted continuous rotation
- Protection class IP 65

On the basis of the tried and tested IP 6000, this precision angle encoder is equipped with a signal interface integrated in the case. It has now been fitted with an electronic system using SMD technology for control of the supply voltage and transformation of angle-proportional voltage into an output current.

This ensures optimum interference immunity in signal transmission even over long cable distances.

The electronic system integrated into the potentiometer replaces an external transformer and supplies an optional standardized output current of 0...20 mA or 4...20 mA. The wide operating voltage range permits supply from an unregulated DC source. The housing is in compliance with protection class IP 65 with the conformable plug and is particularly suited to stringent requirements in the machine, plant and vehicle design sector. The precision ball bearing is designed to withstand high mechanical strains.

In order to ensure the EMV, the cable shielding must be connected with the housing via the plug. The shielding connection can take place galvanic or by a coupling capacitor towards ground.
