- Robotics technology

A robust housing with a simple mounting via pivot heads characterize these transducer series.

The wiper tapping is decoupled free from backlash to the actuating rod, hereby a high accuracy and life span is secured.

This transducer can be used in a wide range of applications such as mechanical and vehicle engineering as well as in automation and robotics technologies. By the simplicity of the measuring system - passive and absolute - is the transducer as far as possible insensitive to electrical interferences and magnetical disturbances.
