Position transducer with NOVOPAD non-contacting inductive measurement principle on printed circuit board basis – with internal return spring – for direct, accurate measurement of travel in display- or feedback applications.

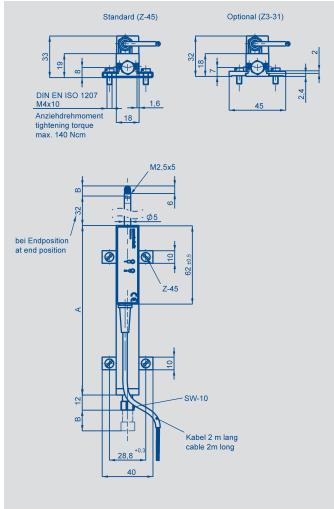

The actuating rod is supported on both ends by slide bearings, allowing high lateral forces on the tip of the rod. The robustness and the compact housing design make the LS1 a reliable solution for the industrial environment. The design of the rear end stop nut on the actuating rod simplifies the connection of acutators like pneumatic cylinders and solenoids.

The integrated signal processor with Teach-In function provides an absolute and proportional current or voltage output signal.

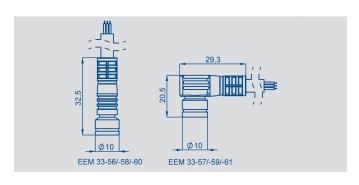

The non-contacting sensors are maintenance and wear-free and convince with an optimal reproducibility, resolution and linearity. The sensor can be exchanged without recalibration. Magnetic fields do not have any effect on the signal measurement.
